PROJECTS:

bdHomeFinders

[Live Site](#)

[Client Site Code](#)

[Backend Code](#)

- Agent can add their property to Sell or Rent. After Admin Verify the agent property it'll add on the all property Page. Data's are store in **MongoDB** and Backend is running on **ExpressJS**, Frontend design with **Tailwind**, **DaisyUI** and **MUI**.
- Users can buy or rent a property by using there card with Stripe. Here all payment history with Transection ID will save in user history.
- Admin, Agent, User dashboard are separated, Admin can handle everything. Agent can manage properties.

Food Donation Site

[Live site](#)

[Client Site Code](#)

[Backend Code](#)

- You can donate food if you have enough. For donation you have to add here and who need it he can send request to the donner. After requesting the donner, if the donner accept it, you are able to pick up the food.
- User can add and manage Food or Request, Here only user can request for the food.
- Users are able to delete or update their request. Data's are store in **MongoDB** and Backend is running on **ExpressJS**. For style css **Tailwind** and **Preline**.

Car Dealer Site

[Live site](#)

[Client Site Code](#)

[Backend Code](#)

- Car Dealer website, Here Dealer can add his new cars according to brand name. To manage the data here I use **mongo DB** and **ExpressJS** for the frontend design I use **TailwindCSS** and **DaisyUI**.
- Here shop owner is the admin. Here users can only see the details of the car. Each and Every car brand section have a slider to show user more car.
- I am trying to update more things in this project, working on **Mongoose** to manage and secure data server.

EXPERIENCE:
